

## The Water Sourcebook Series

The Water Sourcebook is an exemplary classroom activity guide developed by teams of educators and water professionals. Each volume was field tested by a minimum of three classroom teachers prior to final publication. This outstanding resource was made possible through the joint efforts of the U.S. Environmental Protection Agency (EPA), the Alabama Department of Environmental Regulation, LEGACY - Partners in Environmental Education, and the Water Environment Federation. The Water Sourcebook

Series consists of 4 grade specific volumes: K - 2, 3 - 5, 6 - 8, & 9 - 12. The Grades 3-5 volume is also available in a Spanish edition.

Each volume is designed as a comprehensive educational program focused on water issues. The **complete** water management cycle is explained and explored using a scientifically accurate and balanced approach. The supplementary curriculum is multi-disciplinary, incorporating science, social studies, language arts and math content.

Each Water Sourcebook is self contained with grade appropriate hands-on activities and investigations, fact sheets, reference materials, and an extensive glossary. The content is broken down into 5 chapters: Introduction to Water, Drinking Water and Wastewater Treatment, Surface Water Resources, Ground Water Resources, and Wetland and Coastal Waters. The overall message to students: **"Use only what you need and help minimize pollution"**.

The four volume set is now available on a CD-Rom which also includes correlations to the National Educational Standards for Science, Geography and Social Studies. An introductory teacher training video and hands-on workshops are available. **A complete TEKS correlation is available from EPA Region 6.**
